Introduction

A new natural phenomenon has been discovered - the Resonance of Creation. For more than five centuries, the principle of resonance, and, in fact, the principle of "Resonance of Destruction" has been known. Since 2016, we have been publishing materials on the identification of a new natural phenomenon - "resonance of creation" and its use for the treatment of diseases, mainly degenerative ones, including type 1 diabetes, autoimmune diseases, which are "incurable" diseases and other pathologies. With the help of the resonance of creation, multiple sclerosis, Parkinson's disease, Alzheimer's disease and other degenerative diseases are also cured,

Resonance was discovered in 1604 by Galileo Galilei [1]. The phenomenon of resonance can be illustrated as follows. A platoon of soldiers approaches a wooden bridge and the officer gives the command to walk out of step. Why? Because the bridge has certain vibrations and when soldiers march, there are also vibrations. And if the vibrations of the bridge and the vibrations of the marching soldiers coincide, a resonance may occur, a coincidence of vibrations, and their sharp increase, as a result of which the bridge may collapse.

In this article, the role of the bridge is "played" by the disease, and the role of the marching soldiers is "performed" by the therapeutic effect. The soldier's commander did not want the bridge to collapse due to possible resonance. The physician, on the other hand, absolutely needs resonance to destroy the disease.

Resonance methods for studying matter have found wide application in physics, chemistry, biology and medicine. For example, Nuclear Magnetic Resonance (NMR).

At the end of the twentieth century, Magnetic Resonance Imaging (MRI) was developed based on NMR. It is used to obtain images

of the human brain, heart, and digestive tract organs. For the development of MRI in 2003, American biophysicist Paul Lauterbur and his English colleague *Peter Mansfield* were awarded the Nobel Prize in Physiology or Medicine.

In 1975, the German doctor Frank Morell came to the logical conclusion that if a disease of the organs of the human body is inevitably accompanied by disturbances in their frequency rhythm, then the essence of treatment should be to suppress the "unhealthy" fluctuations that have arisen and restore normal ones.

The vegetative resonance test - ART, originally proposed in 1991 by the German scientist G. Schimmel [2], allows for a single-point examination. Testing just one biologically active point of a person makes it possible to assess the condition of not only all organs and systems, but also their relationships.

Methods

In our work, we used a device for resonance therapy based on a computer from IMEDIS, which included both diagnostic and therapeutic parts. A modern device for resonance therapy has a large selector with diagnostic (they are also therapeutic) markers, information copies of diseases, which are called "nosodes" when we are talking about a disease, and "organ preparations" - information copies of healthy organs, when the doctor is dealing with normal ones. , not pathological organs or their parts. "Nosodes" are necessary for identifying and treating diseases and "organopreparations" for testing completely healthy organs or parts thereof. Currently, thanks to the discovery of the resonance of creation, organopreparations are taking part in the treatment of degenerative diseases. We repeat - nosodes are electronic markers of disease and "organ preparations" - information markers of a healthy organ or part of it, recorded on a specific medium.

Each test drug produces a wave effect on the patient. It is necessary to restore spectral (frequency) harmony in the patient [3-18].

Original test preparations (as opposed to their information copies) are material objects, i.e. specific substances with an atomic-molecular structure characteristic of each of them. An integral property of matter is movement. Everything moves: from galaxies, stars and planets to the smallest particles of matter.

Destruction resonance was the only form of resonance until 2016. Usually, the concept of "resonance" was associated with some kind of destruction - bridges, houses, any other buildings, etc. Since 2016, a new discovered phenomenon in nature has been used and designated as "resonance of creation" [3-18].

Results

The activity of a doctor who uses resonance therapy involves a process using modern technologies. First, a diagnosis is carried out. To do this, the nosode of the suspected disease is displayed on a computer screen connected to a device for resonance therapy and it is tested in the patient. If the nosode is "not tested", then resonance does not occur and the arrow on the computer screen does not fall down in the middle of the screen. That is. The patient does not have the disease that is indicated by the nosode. In the same case, if a nosode is tested, a resonance occurs between the patient and the test drug - an arrow on the computer screen falls in the middle of the screen and indicates that the patient has the disease whose name is indicated by the nosode. This is a diagnostic resonance, but not a therapeutic one. This is how resonance diagnostics are carried out in resonance therapy.

To treat an identified disease, the doctor must destroy either a tumor or an infectious process using resonance, and for this it is necessary to potentiate the nosode identified in the patient, i.e. to find the potency of the nosode that will resonate with the pathological process in the patient and destroy the disease, in other words, a therapeutic resonance is necessary. To do this, find the potency of the nosode (usually high), which leads to the fact that when this nosode is tested in a patient, the needle stops falling. This potency of the nosode leads to resonant destruction of the disease structures. In other words, the information content of the nosode in a certain high potency is used for the resonant destruction of the structure of the disease, namely, the treatment of the found disease. The doctor writes down the information content of the potentiated nosode on a sugar grain and the patient takes this sugar grain and is thus treated, i.e. there is a resonant destruction of the structure of the disease [19].

The use of only extremely low potencies of resonance therapy for the treatment of various diseases did not and does not allow the effective treatment of many diseases, including cancer, many infectious diseases, etc. In other words, for many years there has been a crisis in bioresonance therapy, and, thereby, and in general in resonance medicine. This can be seen in the materials of annual scientific conferences on bioresonance therapy.

When it is said that high-potency drugs are used in the works, we mean those potencies that are prepared electronically [5-18].

Since 2016, materials have been published on the use of high potency drugs for treatment [3-18]. It was found that high-potency drugs do not cause any side effects, including toxic effects, on sick and healthy people. But high-potency drugs have proven to be extremely effective in the treatment of severe and extremely severe diseases such as infectious diseases, cancer, including HIV, stones and cysts in organs [3-18]. In particular, metastatic forms of oncology are effectively treated. It has been established that all those forms of cancer that are in the selector of the device for bioresonance therapy are effectively treated with high-potency drugs.

Treatment of patients with drugs of high potency nosodes was not an end in itself. This method was found in medical practice. So, resonance medicine includes resonance diagnostics and resonance therapy. We discovered a new phenomenon in nature - the resonance of creation. Since 2016, materials have been published on the use of the second direction of therapeutic resonance - "resonance of creation" [3-18]. Resonance can not only destroy, for example, diseases, but also create lost biological structures. This made it possible to treat degenerative diseases and diseases requiring regeneration.

We could not find a representation in the scientific literature that resonance can be not only a "resonance of destruction", but also a "resonance of creation". This is obviously due to the fact that it is not easy to imagine how the coincidence of frequencies leads to a response that is not destructive, but creative. In this article we have presented illustrations of how resonance can be not only destructive, but also creative, particularly for the treatment of degenerative diseases, such as type 1 diabetes.

When treating with the resonance of destruction, nosodes of diseases were used, from which drugs were prepared in high potencies. This principle has not been effective for treating degenerative diseases. The creation and formation of the principle of "resonance of creation" became possible only as a result of the fact that not nosodes, but high-potency organomedicines were used for treatment. Without high-potency organomedicines it is impossible to imagine the use of this principle.

Degenerative diseases can also be congenital. It is clear that a significant part of congenital diseases is a consequence of underdevelopment of an organ or organ system. In practice, most often after suffering an illness, for example, inflammation or as a result of the senile process, the level of health of an organ drops, up to its destruction. Such an organ requires restoration (rehabilitation or regeneration). The resonance of creation makes it possible to restore an organ or part of it.

Organic preparations are wave preparations (wave copies) of healthy organs or parts thereof. Nosodes are wave drugs of disease.

The selectors of hardware-software complexes for resonance therapy contain various organ preparations. To restore and rehabilitate organs, we used mainly high-potency organ preparations. They were made in exactly the same way as high potency nosodes.

Let us give an example of the use of organotherapy for treatment. The first type of diabetes is insulin dependent. As a rule, in

such patients, often children or adolescents, the full range of consequences of decreased immunity is revealed [8].

The beta cells of the pancreas in some patients with type 1 diabetes may, in principle, be healthy. But the problem is that they are suppressed by an autoimmune process. The initial impulse is an inflammatory process in the pancreas. It occurs due to the infiltration of immune cells (T lymphocytes) into the islets of Langerhans. Due to a coding defect, T lymphocytes recognize beta cells as strangers, carriers of infection. Since the job of T lymphocytes is to destroy such cells, they destroy beta cells.

When treating type 1 diabetes, the doctor finds an organ preparation of the "tail of the pancreas" in the computer selector connected to the device for bioresonance therapy and tests it in the patient on the device for bioresonance therapy. If the organ is functioning normally, then during testing the arrow on the computer display reaches a value of 100 and does not fall. In the same case, if the organ is not functioning normally, then when testing the organ preparation, the arrow does not reach the value of 100 and falls. The doctor needs to restore the functioning of the organ under study - the tail of the pancreas - to normal. As shown in the published article and in monographs [3-14,15-17], for this purpose it is necessary to create a resonance between the organ preparation, which is located in the selector of our computer and is tested in the patient, and the corresponding organ preparation, which must resonate with the tested organ preparation in patient. The organopreparation taken from the selector of the device is recorded and the potency (most often high) that will resonate with the organopreparation being tested in the patient is selected. The selected organopreparation with the required potency remains in the device for bioresonance therapy. If the potency is selected correctly, then testing the original organ preparation in the device selector leads to the fact that the organ preparation of the tail of the pancreas ceases to be tested in the patient, i.e. the needle of the device reaches the value of 100. If the potency of the organopreparation is not selected correctly, then the needle of the device drops before reaching the value of 100.

So, we have selected the potency of the organopreparation - the "tail of the pancreas" and it thereby resonates with the organopreparation that is being tested in the patient. What is the meaning of the resonance we create? Unlike the resonance of destruction, the new resonance of organ preparations we created does not lead to the destruction of the organ. It leads to the restoration of the organ - the tail of the pancreas and the beta cells that are located in it.

The doctor writes down on the sugar grain the information that is available on the selected organopreparation with the required potency, and this sugar grain becomes a medicine for the patient. The patient takes sugar granules and is treated - the degenerated organ is restored. This is evidenced by testing the organ of interest, the tail of the pancreas, throughout the entire treatment period. During the treatment process, the computer needle during testing gets closer and closer to the value of 100 without falling, and the doctor understands that the degenerated organ is being restored. At the same time, blood sugar levels normalize, and the need for insulin drops to zero.

Thus, the use of the resonance of creation can lead not only to the cure of those diseases that arise as a result of degeneration or senility (Parkinson's disease, etc. [3,8,9,15-17]), but also to the restoration of an organ that was in a state of degeneration, namely the tail of the pancreas.

We understood that without restoring the beta cells of the pancreas, which produce insulin, hormone replacement therapy is not able to cure diabetes mellitus. The effectiveness of treatment is revealed already during the treatment itself, when blood sugar levels are normalized and the need for insulin is reduced to zero. The resonance treatment method is absolutely safe and has no side effects.

In our previous articles [8,15-17], it was shown that the treatment of type 1 diabetes mellitus is carried out by using the "tail of the pancreas" organ preparation in high potency. However, this potency was not exceptionally high, but was found to be highly effective in treating this disease. For the effective treatment of uncomplicated type 1 diabetes mellitus, the use of a potentized organopreparation "type 1 diabetes mellitus" was quite sufficient. At the same time, the treatment of severe type 1 diabetes mellitus with complications, the use of potentized organotherapy drugs for type 1 diabetes mellitus was not effective. That is why some additional mechanism in treatment was necessary. And such an additional mechanism turned out to be the use of autoimmune drugs, since type 1 diabetes is an autoimmune disease.

What potencies of autoimmune drugs can be effective in treating diseases with a high level of incurability? It seems to us that for the treatment of diseases with a high level of incurability it is necessary to use autoimmune drugs in higher potencies - high or very high potencies.

High potency is 1/100,000 potency. Very high potency is 1/100,000,000. It is important to pay attention to the fact that the given potency values are only an "order", i.e. not literal potencies used in treatment. The true potencies for treatment with certain drugs were selected in each specific case of patient treatment, but in no case were taken from the archive. In other words, for each patient with type 1 diabetes mellitus, one or another potency was found by selecting this potency.

Thus, we now know not only about the resonance of destruction, but also about the resonance of creation that we have discovered and the possibility of using the resonance of creation to treat type 1 diabetes, autoimmune diseases, Parkinson's disease, Alzheimer's disease, multiple sclerosis and many other diseases [3-18].

Conclusions

For more than five centuries, the principle of resonance, and, in fact, the principle of "resonance of destruction" has been known. Since 2016, materials have been published on our discovery of a new natural phenomenon - "resonance of creation" and its use for the treatment of diseases, mainly degenerative diseases, including type 1 diabetes and autoimmune diseases, which are "incurable" diseases and other diseases, requiring regeneration. To use the principle of "resonance of creation" in the treatment of diseases, high potencies are required, which are also reflected in publications since 2016.
