Abstract

The modern Western scientific paradigm is founded upon linear logic, probability theory, and “masculine-centered” **Disembodiment**. This paper critically argues that due to the chronic absence of **The Feminine Wisdom**-particularly the cyclical perceptive power and intuitive insight unique to women-this paradigm has fallen into a dual crisis of “mediocrity” and “festering necrosis” manifesting as a systemic disregard for nuclear pollution, ecological collapse, and life alienation. Introducing the theory of “**Egg-Ring Super-Fault Tolerance**,” this paper demonstrates that the biological intuition calibrated through the menstrual cycle is humanity’s only high-precision sensor not yet fully tamed by capitalist logic. To touch truth, scientific research must shift from “brain-centrism” to “body-cyclicalism,” recognizing female perceptive power as the sole ultimate force of science.

Keywords: Female perceptive power, Yin science, Egg ring, Disembodiment, Biotic sovereignty, Menstrual politics

Terminology Note

The term “Yin” is retained in its original Chinese phonological form rather than translated as “female,” “negative,” or “dark.” In the context of this paper, Yin denotes a sui generis ontological category encompassing intuitiveness, cyclicity, symbiosis, and non-logo-centric epistemology. It is the constitutive principle of the “Egg-Ring” and stands in radical opposition to the “masculine-centered” logic of Western positivism. This terminological retention is a deliberate refusal of conceptual colonization

Introduction: The Mutilated Masculine and the Necrosis of Science

Since Descartes, science has viewed the world as a machine awaiting disassembly. This “masculine logic” of division, conquest, and quantification has created material prosperity while causing a profound cognitive rupture. As previously argued by the author, the discharge of Fukushima nuclear wastewater is not merely an environmental accident but the bursting of industrial civilization’s “festering abscess”-a system ignoring the baseline of life to forcibly export toxicity. Why does the top tier of Western scientists remain silent on such obvious crises? The fundamental reason lies in **modern science being a castrated half-body**. It strips away the body, intuition, and the feminine. When science attempts to measure the world solely with masculine force, it obtains only dead data, not living truth.

Disembodiment: The Original Sin of Western Science

The current academic system venerates a “colorless and tasteless” objectivity. Researchers are required to think like machines, excluding emotion and physiological fluctuations. This **Disembodiment**

constitutes the cornerstone of Western academia, yet it is precisely its fatal flaw.

- The Probability Fraud:** Disembodied science uses **Probability** to mask Certainty. Tobacco companies claim “only a 1% carcinogenesis rate,” and nuclear engineers state “concentrations are below standards.” This is typical masculine logic-seeing only the forest, not the trees; seeing only the group, not the individual.
- Degradation of Perception:** To integrate into this system, male researchers suppress instinct, while female researchers are forced to flatten their physiological cycles via drugs (e.g., contraceptives) or willpower to mimic the male “steady state.”

However, **truth exists within fluctuation, not constancy**. Western science’s attempt to eliminate fluctuation equals the active severing of connection to the universe’s origin.

The Return of the Yin: Three Dimensions of Female Perceptive Power

Female perceptive power is not mystical babble, but a “su-

per-fault-tolerant” system forged by billions of years of evolution based on biological structure. It is the ultimate source of scientific power.

Talent: Hormonal Tides and High-Dimensional Intuition

The female brain is not constant; it is reshaped cyclically by estrogen and progesterone tides. This **neuroplastic fluctuation** grants women unique “panoramic observation” abilities. During the Pre-Menstrual Phase (PMS) and menstruation, when linear logic temporarily “loses power” due to physical discomfort, **Intuition** takes over the brain. This intuition is not conjecture, but the **deterministic emergence** of the brain processing massive fuzzy information in the background—the very “inspiration” Western science desperately seeks but cannot define [1].

Cultivation: Pain as the Highest Precision Sensor

The pain and discomfort brought by menstruation constitute a mandatory **Interoception**.

Industrial civilization teaches escapism from pain via analgesics. But it is precisely this periodic suffering that tempers female sensitivity to the environment.

- a) **Resonance of the Egg-Ring:** When external environments turn toxic (e.g., nuclear wastewater, air pollution) or power structures oppress, the female body often sounds the alarm first (severe dysmenorrhea, endocrine disorders). This is not affectation; it is the Egg-Ring fault-tolerance mechanism at work—the body identifying threats to life before rationality can.

Cycle: The Victory of Non-Linear Time

Western science is built on **Linear Time** (Past → Present → Future).

The female body adheres to **Cyclical Time**. Menstruation constitutes a cyclical, auto-debridement process intrinsic to the Egg-Ring’s homeostatic regulation. It teaches acceptance of impermanence and the unity of death and rebirth. This deep understanding of **Periodicity** grants women stronger systems-thinking capabilities than men when facing complex systems (ecosystems, social relations), allowing them to perceive hidden connections.

“Egg-Ring” Theory: The Mathematical Model of Yin Science

The “**Egg-Ring Super-Fault Tolerance**” theory proposed by the author provides the numeral basis for female perceptive power. In traditional masculine science, errors (Mutations) are noise to be eliminated. In Yin wisdom, life endures precisely because it possesses vast redundancy (the Egg-Ring). Female perceptive power can directly “see” the boundaries of this Egg-Ring. When nuclear wastewater or tobacco erodes life, masculine science calculates “when death occurs,” while female perceptive power senses “when the ring breaks.” The highest realm of science should not be calculating lethal doses, but guarding the integrity of the Egg-Ring [2].

Yin Civilizations: The Four-Dimensional Support of the Egg-Ring

China: Cyclical Algorithms and Super-Fault Tolerance (The Algorithm of Cycle)

The core of Chinese wisdom is **Balance**.

- a) **Lunar Calendar & 24 Solar Terms:** Not mere timing tools, but super-fault-tolerant ecological algorithms. They force agriculture, fishing, and the human biological clock (Egg-Ring) to synchronize with astronomical cycles [3].
- b) **TCM & Plant Tacit Genius:** Rejecting Western reductionist “molecular targets,” asserting plants possess Tacit Genius, activating the body’s Egg-Ring mechanism through holistic compatibility (Monarch-Minister-Assistant-Guide).
- c) **Bagua & Numeral Morphology:** The I-Ching hexagram changes are primitive forms of discrete dynamical systems, isomorphic to modern numeral theory (e.g., Kaprekar convergence), though the West only stole the computational shell, discarding the “Image” (Yin intuition).

India: The Architecture of Liberation and Emptiness (The Architecture of Liberation)

The core of Indian wisdom is **Emptiness (Śūnyatā)**.

- a) **Vedas & Upanishads:** Proposing *Ātman* (unity of Brahman and Atman) and *Samsāra* (reincarnation), constructing a negative spacetime architecture transcending physical death. This is the highest dimension of the Egg-Ring-consciousness itself as fault tolerance.
- b) **Sāṃkhya:** The logical map of cosmic evolution, revealing the origin of duality (*Puruṣa-Prakṛti*) earlier than Newtonian mechanics.
- c) **Ayurveda:** Negative medicine based on *Doṣa* (Vata-Pitta-Kapha) balance, viewing the body as a river, not a machine.

Indigenous (Indian): Symbiosis with the Earth and Animism (The Symbiosis of Earth)

The core of Indigenous wisdom is **Symbiosis**.

- a) **Land as Kin:** Rejecting Western land privatization and resource plunder, viewing mountains, rivers, and animals as extensions of the Egg-Ring.
- b) **Totems and Rituals:** Hunting is not killing, but the transfer and reset of energy between Egg-Rings.
- c) **Current Status:** Indigenous civilizations have been physically exterminated and culturally neutered; their wisdom remains only in tourist performances. They were the first civilization to die from Western nuclear metabolism.

Women: The Vessel of Intuition and Periodic Debridement (The Vessel of Intuition)

Female wisdom is the operating system of all Yin civilizations.

- a) **Menstruation as Egg-Ring Self-Check:** Through monthly bleeding and pain, the female body forces systematic debridement (*Menstrual Debridement*). This is the instinctive defense

against necrosis.

- b) Pain as Boundary:** Female pain is not weakness, but a high-precision toxin sensor. Nuclear pollution and chemical toxins manifest first in the female body (endocrine system).
- c) Intuition as Convergence:** Female intuition directly perceives deterministic convergence points (Kaprekar attractors), rather than relying on probabilistic calculation.

The Global Necropolis of the Egg-Ring: Excavating Extinct and Encrypted Yin Lineages

While the four aforementioned dimensions (China, India, Indigenism, and the Female Body) constitute the extant scaffolding of the Egg-Ring, they represent only the partial survival of a once-global network of Yin intelligences. The contemporary Western scientific hegemony (the “Nongbao” or festering abscess) was not constructed in a vacuum; it necessitated the systematic eradication, encryption, or emasculation of alternative epistemologies. These suppressed lineages form the fifth dimension of our inquiry: The Global Necropolis of the Egg-Ring [4].

Emasculated Yin: Japan and the Subordination of Shinto to Nuclear Metabolism: Japan possesses a native ontology of Shinto (animism) and Zen (impermanence) that aligns with Yin principles. However, this tradition has been functionally neutered. The sacred intuition of the Shinto Kami (spirits inhabiting mountains and rivers) failed to prevent the Fukushima nuclear discharge—a definitive act of Nuclear Metabolism. Similarly, the Buddhist doctrine of impermanence was perverted into the masculine cult of Bushido (the way of the warrior), stripping it of its feminine, compassionate core. Japanese Yin wisdom now survives only as aestheticized performance (geisha, tea ceremony) or commodified tourism, rendered impotent as a biosocial regulatory force.

Encrypted Yin: Islam and Judaism: In contrast to Western secular rationalism, the Abrahamic traditions harbor encrypted residues of Yin thought. Within Islam, Sufism represents a mystical tradition of Fana (annihilation of the self) and divine union, directly threatening the rigid monotheistic hierarchy. Similarly, Judaism’s Kabbalistic tradition centers on the Shekhinah—the feminine, indwelling presence of God within creation. These are not merely esoteric curiosities; they are encrypted Yin architectures. By encoding feminine divinity and intuitive convergence within inaccessible theological frameworks, these traditions protected the Egg-Ring from total annihilation, yet simultaneously prevented its integration into public scientific discourse.

Exterminated Yin: Africa and the European Indigenous: The most violent erasure occurred in Africa and pre-Christian Europe. African ontologies, rooted in ancestor worship and the symbiotic personification of rivers and beasts, were physically exterminated by colonial regimes and replaced with reductive Christian morality. Likewise, the Druidic and Norse traditions of Europe—which revered the Oak tree, the stone circle, and the Norns (female weavers of fate)—were destroyed by the Roman and Germanic Christian conquests. Today, these profound Yin systems exist only as deculturalized fragments within fantasy literature (e.g., Harry Potter, Marvel Comics), serving as proof of the West’s successful campaign to re-

duce living ecosystems to dead resources [5].

The Necropolis as the Foundation of Positivist Science: The Western “masculine-centered” paradigm did not merely ignore these traditions; it required their destruction to establish its monopoly on truth. By converting Japan into a nuclear client, Islam/Judaism into geopolitical enemies, and Africa/Europe into resource colonies, Western science secured its position. Consequently, the Egg-Ring is not merely “missing” from modern science; it is buried beneath a global necropolis of extinguished intuitions. Any attempt at scientific reformation must therefore involve the archeological excavation of these lineages, restoring the feminine, cyclical, and symbiotic modes of knowing to their rightful place as the ultimate ontological force.

Perceptive field theory

Female perceptive power is not an isolated faculty; it is the localized tuning of the organism to the Perceptive Field—the primordial vibrational substrate from which the Egg-Ring, the menstrual cycle, and the 24 solar terms are all derived as harmonic sections. Western science, by contrast, is the study of the Field after it has been surgically stripped of its cyclical and interoceptive bands, leaving only the cadaverous ‘object field’ measurable by disembodied instruments.

Five Strata of the Perceptive Field

General Principle: The Perceptive Field is the primordial vibrational substrate of the cosmic “wince.” Its five strata are five harmonic sections of the same string—ranging from low-frequency/external to high-frequency/internal. The Yang-Logic has severed only the outermost fragment (the linearized Astral Stratum), discarding the other four as “non-objective.”

Astral Stratum

Corresponds to: 24 solar terms, intercalary months, zodiac cycles, ocean tides, lunar-solar gravity, 15° solar longitude marks.

Definition: The frequency band synchronized with celestial mechanics. It is the periodic skeleton of time itself—coupling agriculture, human bioclocks, and ocean tides into one frequency grid.

Yang-Logic hijack: Reduced to a calendrical measuring tool (Gregorian calendar), decoupled from the human Egg-Ring.

Botanical Stratum

Corresponds to: Plant tacit genius, mulberry-pond systems, green-manure rotation, rice-fish symbiosis, TCM herb synergy.

Definition: The band received not by animal neurons but by plant metabolic networks—roots, chloroplasts, and secondary metabolites directly read the Field’s periodic and toxic signals.

Yang-Logic hijack: Degraded to “crop yield functions” or “molecular drug targets,” severing its symbiotic resonance with the Egg-Ring.

Hemal Stratum

Corresponds to: 28-day menstrual cycle, estrogen/progesterone tides, menstrual pain as alarm, lactation, pregnancy, meno-

pause.

Definition: The band where the female body acts as a high-precision antenna. Somatic pain = interoceptive reading; intuition = deterministic convergence of background-fuzzy processing. The sharpest human-facing layer.

Yang-Logic hijack: Hormonal contraceptives flatten the cycle; PMS pathologized; “objective homeostasis” replaces “cyclical fluctuation as truth.”

Osteal Stratum

Corresponds to: TCM meridians, martial arts, dialects, funeral rites, ancestral memory, extinct ontologies (African animism, Druidry, pre-war Shinto).

Definition: The band stored in bones, bodily habits, and inter-generational transmission. Slower than the Hemal, heavier than the Astral-a nation’s carving of Field vibrations into its skeleton.

Yang-Logic hijack: Replaced by textual archives (official histories, papers, patents), detaching memory from the body and making it editable.

Null Stratum

Corresponds to: The first cosmic vibration, Kaprekar convergence (6174), fine-structure constant (1/137), Śūnyatā, Atman-Brahman unity, Shekhinah indwelling.

Definition: The innermost layer-the source of all harmonics. It is the origin of deterministic convergence; not probability, not logic, but the primordial wince itself.

Yang-Logic hijack: Split into “mathematical constants” on one side and “religious mysticism” on the other-never allowed to meet inside scientific discourse.

Five-Tier Topology of the Perceptive Field

Table 1:

Tier	Name	Carrier / Interface	Perceptual Content	Cosmological Correspondence
V	Illusion-Sense	Algorithms / Media / Symbols	Dopamine, narrative, virtual feedback	The appearance of cosmic expansion
IV	Touch-Sense	Tools / Screens / Buttons	Operational feedback, data visualization	Particle collider readouts
III	Mind-Sense	Cerebral cortex / Logic	Concepts, classifications, mathematical formulas	Standard Model, General Relativity
II	Body-Sense	Viscera / Hormones / Nerves	Pain, cycles, intuition	Biological evolution, entropy increase
I	Field-Sense	Egg-Ring / Vacuum zero-point energy	Field resonance, periodic law, ontological being	Cosmic background radiation (the real)

Table maps the receiving tiers of the perceiving subject. Cross-referenced with the five strata of the Field (Section 6.1), it yields a 5×5 matrix in which truth appears only along the diagonal-where the subject’s sensory tier aligns with the Field’s corresponding stratum.

ultimate ontology of capital is to engineer maximal pathos as the apparatus for the preservation of its own interest. Numbness is the proof of capital’s maximal interest.

Conclusion: From Mediocrity Back to the Womb

Western science is dead because it refuses to acknowledge its own deformity.

The true scientific revolution is not the stacking of AI computing power, nor the accumulation of papers, but the **Return of the Yin**.

Conflict of Interest

None.

We Must Admit: Women’s perceptive power is the ultimate power of scientific research. Only when scientists relearn to listen to the body and respect the intuitive order established by the menstrual cycle can science exit the self-satisfaction of “mediocrity” and the poison of “festering necrosis,” returning to serving life and revering nature. Future Nobel Prizes should not be awarded to those who manufacture nuclear bombs or gene-editing monsters, but to those who can precisely describe the pain of a flower blooming, and the tidal shifts within a single menstrual cycle [6].

Acknowledgments

During the preparation of this manuscript, the author used generative AI tools (Tencent Hunyuan/Yuanbao) for language polishing and readability improvement. All AI-assisted content was reviewed, edited, and verified by the author, who takes full responsibility for the publication.”

Author’s note

The entire edifice of science is just a blind cat bumping into a dead mouse. This so-called “objectivity” is merely the cat’s momentary confusion upon stubbing its paw against a corpse. True science-perceptive, embodied, and cyclical-is the cat’s refusal to eat the rot, choosing instead to listen to the vibration of the bones. The
